

Build specifically for
Sinclair

SINCLAIR LABELLING SOLUTIONS

Increase your labelling speed and reduce the strain on your packing crew with Berstron's High-speed electronic label machines.

Your advantage **Speed and Flexibility**

This particular label dispenser is designed and build to give you the most robust and efficient tool to apply labels to any sort of fruit (or any other items). A slight tap with the business end of the machine to the product puts a label down and immediately readies a label for the next item.

The intelligence within the machine scans the size of your label and feeds the appropriate amount to present the next label.

The internal 7,4V Lithium battery ensures two days of labeling on a single (4 hour) charge. It can put down 5 labels per second which makes 18.000 labels per hour. It is safe to say this labeler is quicker than it's operator. In short, the machine can take on an impressive workload in your labeling process.

Capabilities **Product Specifications**

Description

Soft touch, high speed hand-held electric labeller specifically designed to be 100% compatible with the Sinclair Label System.

Specifications

Labels speed:	5 labels per second
Operation:	2 days on full charge
Weight:	670 g.
Battery:	7.4 V lithium, 3000mAh
Charger:	100-240 V / 2 A
Charge time:	0 to 100% 4 hours

Label roll specifications

Maximum internal diameter:	37mm
Maximum external diameter:	120mm
Maximum label width:	25mm
